WHAT WILL YOU BUILD NEXT?

ARCKIT is a multi-award winning architectural modelling system. The reusable 'freeform' components allow budding architects and model enthusiasts to physically explore designs and bring ideas to life faster than ever before. And now, our new **ArckitPLAY** series kits introduce children 4 years of age and upwards to the wonderful world of modern architectural design and building forms.

Design and create your colourful miniature worlds with **LITTLE Architect**! Head to your favourite city and construct fantastic buildings, bustling streets and local neighbourhoods with a selection of pastel components and an array of iconic architectural shapes to spark your imagination. Use the coloured floor tiles to represent grass, roads, water and lots more. Imagine It. Build It!

It's fast, modular and provides hours of fun!

The sample building instructions for the box cover model are simply to familiarise you with Arckit's reusable system and to get you on your way with your own creations. You can visit arckit.com for more sample builds like the ones you see here. Pro tip! For even more fun and bigger builds, why not integrate your **LITTLE Architect** kit with **Arckit Cityscape+**.
