WHEELBARROW

The picture shows how you use 2 discs wholly to make the wheel. By using extra nuts the Disc wheels are held in position and will turn round without undoing the nuts. **LOCKNUTTING** is putting 2 nuts together so that they cannot move. In this model 2 nuts are also placed on either side of the wheels, and 2 at each end, making 8 in all.

● 關於「新」的定義

If Spring Clips have a tendency to "slip" on the Axle Rods and Crank Handles, clips can be overruled by inserting a small piece of paper between the Clip and the Rods. Clips that are tight or "wrong" can be pressed on with your thumb. Again, Spring Clips can also be used to hold tight the end of water to Crank Handles or Axle Taps that come between Clips and Rod.
