This step shows the construction of the main body of the volcano. A large, dark grey, trapezoidal piece is being attached to the base. This piece has a central rectangular opening and is decorated with white circular patterns. Red Technic bricks are used to reinforce the structure, particularly around the central opening and along the top edges. A small red and blue piece is visible on the left side, likely a hinge or connector. A small inset in the bottom left corner shows a black L-shaped Technic piece, labeled '1', which is the part to be added in the next step.
