STEELBUILDER

The Construction Set That Builds Realistic Models

Airplanes! Streamlined Locomotives! Traveling Cranes! Racing Cars! Steam Shovels! Cross Country Buses! Elevators! Automobiles! Pile Drivers! Trip Hammers! Bridges! Ferris Wheels! Buildings! You can make them all—and hundreds of other things—with STEELBUILDER.

Half the fun of owning a STEELBUILDER set is in making the models and the other half is in playing with them after they're made, for the things you construct with your STEELBUILDER sets *actually work!*

There's a lot of fun building stationary models, of course, but you don't get nearly as big a kick out of them as you do out of the things *you can get in motion* after you've built them!

You like toys that *move!* Every boy does. And the engineers who designed STEELBUILDER planned each set so that the things you make with it are *Action-models*.

Look at the steam shovel on page 11, for instance. You can not only control the boom, but you can make the shovel section itself slide up and down in its steel channel—just as the real steam shovels do on a regular excavation job!

We haven't tried to show you, in this book, *everything* you can make. The models illustrated are *just to get you started*, for every boy who's ever owned a STEELBUILDER set has made dozens of other things with it; things *he's thought out for himself*. That's one of the big advantages in STEELBUILDER. It can't grow stale. You don't just build the things you see pictured in this book—and then stop. You go on from them to others. And still others! The only limit to what you can make is your own imagination! And there's great fun in getting a few other boys and seeing who can think up and build the best and most original new models.

There's another thing too: Although you can make some big things with STEELBUILDER, putting them together *isn't at all hard*. It is fascinating and educational sport, because the parts have been so designed that you can get a wide range of effects by combining relatively few pieces.

The punched and grooved girders and panels with their interlocking corner-pieces are *patented* and found only in STEELBUILDER sets. They are what make it possible for you to build

extra large models so strongly and solidly that you can move them around without any fear of their sagging, bending or coming apart.

The flat panels—some of which are cut out like doors and windows—make it easy for you to construct buildings of all sorts, Airplane Hangars, Garages, Railroad Stations, Loading Platforms, Boats and a lot of other interesting things.

And STEELBUILDER is the *only* set with which you can also make—*without the use of a single screw or rivet*—such really useful objects as pencil boxes, ash trays and cigar or cigarette boxes for dad or big brother, and vanity and pin cases, etc., for mother and sister.

The colors of STEELBUILDER pieces are important, too, for they help you put together—quickly—all the parts you need for any model.

In short, when you make things with a STEELBUILDER set, *you work just like a real construction engineer!* You start with a picture of the model and a list of the pieces needed to make it. You get them together and then commence to build—just as a construction engineer would build a bridge or anything else with the girders and other parts that had been delivered to the job. You don't hunt around for this or that. You know in advance how many pieces you're going to use—just as a real engineer does. Thus, STEELBUILDER—which has been tested and approved by engineers—trains your mind along sound engineering lines and gives you loads of fun besides.

STEELBUILDER parts are finished in durable colors that were picked for their wearing qualities after many tests, for we wanted you to have, in STEELBUILDER, not only the *finest, best looking* and *most rugged* set it was possible to produce, but one that would remain bright and attractive for a long time to come.

STEELBUILDER is a real boy's toy—built for hard knocks and years of pleasure-giving.

All the illustrations in this book were drawn from actual models. Pick out something you'd like to build, get your pieces together and start in! You'll find that making things with STEELBUILDER is just about the finest and most interesting fun you've ever had!

This exploded view diagram illustrates the assembly of a mechanical device. The components are primarily blue beams and yellow structural parts. The assembly includes:

- Top Section:** A horizontal beam assembly with a pulley system on the left and a vertical support structure on the right.
- Central Section:** A vertical beam assembly with a horizontal crossbar and a yellow rectangular component.
- Right Section:** A large yellow rectangular frame with a blue beam attached to its right side.
- Bottom Section:** A horizontal beam assembly with a yellow rectangular component and a blue beam attached to its right side.
- Left Section:** A vertical beam assembly with a horizontal crossbar and a yellow rectangular component.
- Assembly Details:** Various pins, bolts, and connectors are shown in exploded positions, indicating how the components are joined.
